# OYEFULE OLUWATAYO

**Email**: oyefuleoluwatayo@gmail.com
**Phone: +234-807-991-9811**
**LinkedIn:** linkedin.com/in/oyefule-oluwatayo
**GitHub**:github.com/gentcod
**Portfolio**: oyefuleoluwatayo.netlify.app

## PROFESSIONAL SUMMARY

**Senior Backend Engineer** specializing in scalable, high performance microservices and distributed systems. Over 5 years of experience architecting and scaling cloud-native applications and real-time data processing pipelines. Proven ability to lead feature development, mentor teams, and drive end-to-end system reliability via modern Software Engineering and DevOps practices.

## CERTIFICATIONS

- Google Associate Cloud Engineer Certification

## TECHNICAL SKILLS AND CORE COMPETENCIES

- **Languages & Core Technologies:** Go, TypeScript/JavaScript, NodeJS, C#, SQL, Shell Scripting, Rust
- **Cloud, DevOps & Infrastructure:** AWS (Lambda, S3, EC2, RDS), GCP, Azure, Kubernetes**,** Docker**,** Terraform (IaC), GitHub Actions, Jenkins, Prometheus, Elasticsearch
- **Backend & Data (Architecture):** Microservices, Distributed Systems, gRPC, RESTful APIs, WebSockets, Kafka, RabbitMQ, Event-Driven Architecture, MySQL, PostgreSQL, MongoDB, Redis, Query Tuning
- **Frameworks & Tools:** Express, React, Flutter, .NET Core, Git, Linux,, ServiceNow, React-Native

## PROFESSIONAL EXPERIENCE

**Backend Developer** | eBanqo
*Hybrid - Lagos State, Nigeria (California) | January 2026 - Present*

- Own and maintain core webchat microservice enabling real-time customer-business communication across digital channels, serving millions of users with guaranteed uptime and sub-100ms response times
- Designed and implemented high-availability AI chat flow service with automated failover, successfully handling 10,000+ concurrent users during peak traffic.
- Collaborate within microservices architecture, contributing to service integration patterns, API design, and inter-service communication protocols
- Enhanced existing Elasticsearch data retrieval flows, optimizing queries and large dataset retrieval to reduce database load and improve service performance.
- Partner cross-functionally with Product, QA, and Frontend teams to translate business requirements into scalable, maintainable backend solutions.
- Developed and integrated components within a VoIP calling infrastructure using OpenSIPS and FreeSWITCH, working with SIP-based call routing, signaling, and real-time voice communication services.

**Lead Software Engineer (*Part-Time Contract*)** | Alterlight
*Remote - Lagos State, Nigeria | June 2025 - Dec 2025*

- Architected scalable cloud-native infrastructure on AWS, implementing Lambda functions for serverless compute and S3 for optimized media storage and retrieval
- Designed and deployed automated CI/CD pipelines using GitHub Actions, streamlining AWS deployments and increasing release velocity while maintaining deployment reliability
- Led cross-functional engineering team through sprint planning, task delegation, and code review enforcement, ensuring adherence to coding standards and best practices
- Bridged engineering and management teams to align technical implementation with business objectives and project timelines
- Collaborated with UI/UX designers to refine technical specifications, balancing usability, performance, and implementation efficiency.

**Backend Team Lead (*Part-Time Contract*)** | Provenier
*Remote - Lagos State, Nigeria | July 2025 - Dec 2025*

- Architected the core systems using Go, NodeJS, MongoDB and Redis, enabling low-latency data access and caching.
- Implemented API Gateway and traffic control mechanisms to safeguard backend services against abuse.
- Automated engineering workflows by leveraging GitHub version control and code reviews for collaboration and quality assurance.
- Implemented user-friendly features for an alumni website, enabling elderly users to easily post and manage updates, improving engagement and data accessibility.

**Backend Engineer (*Part-Time Contract*)** | Provenier
*Remote - Lagos State, Nigeria | March 2024 - July 2025*

- Developed robust backend services with NodeJS and TypeScript, powering high-volume investor platform operations with consistent performance
- Designed database architecture using MongoDB and Redis for optimized data persistence, caching, and retrieval patterns
- Built user-friendly features for alumni website enabling elderly users to easily manage content updates, significantly improving engagement and accessibility

**DevOps Engineer & Backend Engineer** | Gaims Technologies Limited
*Remote - Lagos State, Nigeria | August 2023 - July 2024*

- Engineered cloud-native deployments on Digital Ocean with automated infrastructure provisioning, monitoring, and scaling capabilities
- Built production-grade backend services using NodeJS/JavaScript, integrating MySQL and Redis for reliable data persistence and caching
- Architected gRPC-powered analytics pipelines enabling real-time risk assessment and platform performance monitoring
- Automated CI/CD workflows using Linux and Shell scripting, reducing manual deployment overhead and accelerating release cycles
- Managed infrastructure operations and domain lifecycles, maintaining 99.9% uptime while optimizing cloud resource costs
- Integrated payment gateways and dynamic subscription features, streamlining transaction processing and revenue operations

**Software Engineer Intern (*Industrial Training)*** | Chevron Nigeria Limited
*Hybrid - Lagos State, Nigeria | February 2023 - July 2023*

- Led website enhancement initiatives using ASP.NET Core and Azure DevOps, improving user engagement and platform performance
- Executed critical database migration from Oracle to cloud platforms, enhancing data accessibility and operational efficiency
- Created executive-level Power BI dashboards with T-SQL integration, enabling data-driven strategic decision-making
- Enhanced oil production reporting systems, increasing reporting efficiency by 30% through process optimization and automation

**Full-Stack Engineer** | Grox
*Remote - Austin TX, United States | November 2021 - January 2023*

- Automated customer engagement workflows using Python and JavaScript, improving communication efficiency and retention metrics
- Optimized e-commerce platform performance through workflow automation, increasing conversion rates and streamlining operations
- Conducted comprehensive A/B testing on UI/UX enhancements, achieving 20% increase in user retention through data-driven improvements

## EDUCATION

**Bachelor of Technology, Computer Science (Software Engineering Option)**
Federal University of Technology Akure | *Ondo, Nigeria* | *2023*

## PROJECTS

**NLP-to-SQL:**
[Technologies]: Go, Artificial Intelligence, Postgres, MySQL, LLMs (Gemini, ChatGPT), WebSocket, RAG Architecture

- **Engineered an intelligent data interaction engine using Go and Retrieval-Augmented Generation (RAG)**, enabling non-technical users to generate complex database queries via natural language.

**Do-Nginx-App: Automated Web Server Initialization SaaS:**
[Technologies]: Go, Shell Scripting, CI/CD, SSH Automation, Nginx, Cloud Infrastructure

- Built SaaS application for automated remote virtual machine management and web server configuration
- Streamlined deployment workflows with automated Nginx-proxied server initialization, reducing manual setup overhead

**Photo Compressor:**
[Technologies]: Go, WASM, JavaScript, HTML, CSS

- Developed lightweight image compressor compiled to WebAssembly, released as Chrome Extension compatible with all browsers
- Ensured complete data privacy with client-side-only compression, supporting JPEG and PNG formats with instant downloads

**DbAdmin:**
[Technologies]: Go, Postgres, MySQL, CLI

- Built a Command-Line Interface tool that interfaces with your database for access privilege maintenance using GoLang (still in development).
- Implementation that enables fine-grained control for database user and privilege management.

**DummyBank**:
[Technologies]: Go, Kubernetes, gRPC, Postgres, Docker, SQL, Redis, Promotheus

- Architected a comprehensive banking simulation using **Kubernetes, gRPC, and Go microservices** to demonstrate mastery of service discovery, asynchronous transactions (Kafka), and cloud deployment strategies.

## OPEN SOURCE CONTRIBUTIONS

- Meshery (CNCF Project): Cloud-Native Manager
- Jaeger (CNCF Project): Distributed Tracing Platform
- Mattermost: Secure Collaboration Platform
